## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-10 and 12-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pham et al (5,663,474) in view of Olah (5,073,674).

Pham discloses an alkylation process of aliphatic or aromatic hydrocarbon with olefin in the presence of solid polymeric hydrogen fluoride catalyst (the abstract; col. 2, lines 17-51; col. 4, lines 38-57).

Pham does not disclose using a polyhydrogen fluoride (see entire patent for details). However, Olah discloses that liquid onium polyhydrogen fluoride can be used as a safe alkylation catalyst (the abstract; col. 1, lines 11-68).

Art Unit: 1764

It would have been obvious to one having ordinary skill in the art at the time the invention was made to have modified the Pham process by using liquid onium polyhydrogen fluoride in the place of hydrogen fluoride of the Pham catalyst since it is expected that using polyhydrogen fluoride or hydrogen fluoride would yield similar results. Applicants are reminded that it has been established that closely relate homologs, analogs and isomers in chemistry may create a prima facie case of obviousness. *In re Dillon* 16 USPQ 2d 1897, 1904 (Fed. Cir. 1990); *In re Payne* 203 USPQ 245 (CCPA 1979); *In re Mills* 126 USPQ 513 (CCPA 1960); *In re Henze* 85 USPQ 261 (CCPA 1950); *In re Haas* 60 USPQ 544 (CCPA 1944).

Sulfonation of alkyl-aromatic is well-known to be used for production of detergent.

Olah discloses that the reaction is carried out in the presence of Lewis acid (col. 2, lines 58-65).

The limitation of claim 12 can be found on column 2, lines 30-33.

#### ***Allowable Subject Matter***

Claim 11 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
